Payment Status Analysis

Payment Analysis

Daily Revenue Trend

Daily Revenue Trend (Last 30 Days)

Key Analysis & Insights

1. PAYMENT TRANSACTION OVERVIEW

The payments dataset contains 15 total transaction records, encompassing all payment attempts processed through the TicketFlicks platform. Of these, 15 were successfully completed, bringing the overall transaction success rate to 100.0%. This is the single most important metric for the payments report - it quantifies the reliability of the payment gateway and the degree to which users successfully complete the financial step of the booking funnel. Net revenue collected from all successful transactions amounts to Rs8,781.00.

2. FAILED & PENDING TRANSACTIONS

0 transactions carry a failed status, representing payment attempts that were rejected at the gateway level - typically due to insufficient funds, expired cards, or network timeouts. A further 0 transactions remain in a pending or unpaid state, suggesting sessions that were initiated but never completed by the user. Both categories represent direct revenue leakage: the failed transactions are often recoverable through alternative payment prompting, while pending sessions benefit from time-sensitive reminder notifications sent within 15 minutes of session initiation.

3. STRATEGIC PAYMENT RECOMMENDATIONS

With a 100.0% success rate, approximately 0.0% of all initiated payment sessions are not converting to revenue. Closing this gap by even 5 percentage points would result in significant incremental revenue given the current transaction volume. Key recommendations include: integrating UPI and wallet payment options to reduce card-related failures, implementing intelligent retry prompts for failed transactions, and setting up automated session expiry with inventory release to keep show availability accurate for other users.
